# BLACK HAWK

BLACK
HAWK

A PRO-ACTIVE PEACE OF MIND

The Blackhawk Analytic PlatformTM is the only solution on the market that combines network monitoring and incident response into a cohesive cyber defense appliance. It's pre-integrated and works directly with your infrastructure.

The Blackhawk Analytic PlatformTM is flexible to your tradecraft and adversary know-how, and can be integrated with existing endpoint solutions. If you need support or experience to operate the Blackhawk or hunt through the data for today's sophisticated adversaries, our team can manage this for you through the Blackhawk+TM service.

YOUR ANALYST'S DREAM

You'll anticipate every threat with world-class detection and response functionality. All-in-one Network Capture, Endpoint Evaluation, and Threat Intelligence, one-view mission control, IDS and RetroIDS give you maximum insight and security.

BEAUTIFULLY INTEGRATED

With fully integrated technology, every Blackhawk component speaks the same language. You get less than 1% packet loss at enterprise-level, full-time packet capture while real-time indexing immediately queries and retrieves information. Blackhawk is also one of the few, dual-ported, solid-state drives in the world.

FIND MORE. SPEND LESS.

Fly higher, free from heavy costs and outdated functionality. With Blackhawk, you can complete investigations in hours or days instead of weeks or months. Win against persistent attackers by equipping your security analysts with best-in-class forensic tools.

We embed the expertise of our hard-fought battles into Blackhawk. We believe you need the same quality of service as the world's top organizations.

The Blackhawk Analytic PlatformTM is the only solution in the market that includes a fully comprehensive detection and response toolset in one appliance. It monitors network traffic and correlates those network transactions with any available audit data using:

HawkSenseTM to ensure your monitoring perspective remains protected from malicious actors and catches malicious network transactions in real-time.

Mission Control to analyze and visualize any data sources you can throw at it.

Network Capture to retain and analyze network packets entering/exiting and moving throughout your internal networks.

Retro-IDS to evaluate past network traffic for newly released threat intelligence or newly discovered zero-day vulnerabilities vulnerabilities.

Talon to identify and eradicate malicious actors on your endpoints.

The NestTM to stay current with the latest threat intelligence and analytics.

Blackhawk Cybersecurity ServerTM to provide fail-safe storage to house your complete detection and response tool set and retain packets for as long as required.

ABOUT BLACKHAWKNEST INC.

BlackhawkNest is a cybersecurity company with a full range of custom technology built for front-line security. We combine durable storage hardware and powerful security software to eradicate the toughest cyber threats.
