

# BLACK HAWK

PRODUCT OVERVIEW

## CAPTURE IN REAL TIME, ALL THE TIME.

Network Capture is a full-time, full-packet capture solution. Most network capture solutions only save a few packets before and after a triggered alert. But with Blackhawk's Network Capture, you can reliably index and analyze all data for complete visibility and an in-depth look into your network, during and after an incident.

# CAPTURE

Our methodology flips the script on cybersecurity. With Blackhawk, you're not just defending from threats, you're ready to engage them.

## REAL-TIME INDEXING

Set Network Capture behind your firewall or inline to process all traffic with less than 1% data loss at 40 Gbps. Real-time indexing enables immediate query and analysis, allowing an analyst to see more and work faster.

## SAVE EVERYTHING

Blackhawk has the ability, and the capacity, to save everything. Which means you can fully investigate any incident with no gaps in the timeline. You can look into the shadows to see more data and further back than before for effective correlation.

## FORENSICALLY SOUND

Comprehensive is not just a Blackhawk buzzword. All incoming traffic into Network Capture is collected, indexed, and forensically stored on the powerfully, world-class Cybersecurity Server component.

## NETWORK CAPTURE IS A FULL-TIME, FULL-PACKET CAPTURE SOLUTION.

Network Capture processes all traffic which passes through a network entrance/exit point with less than 1% data loss at 40 Gbps, while also storing all network traffic in a forensically sound manner. Real-time indexing enables immediate query and analysis, allowing an analyst to be able to see more and work faster.

**BLACKHAWK**

## ABOUT BLACKHAWKNEST INC.

BlackhawkNest is a cybersecurity company with a full range of custom technology built for front-line security. We combine durable storage hardware and powerful security software to eradicate the toughest cyber threats.
