

BLACK HAWK

PRODUCT OVERVIEW

CATCH ATTACKERS OFF-GUARD

Perform e-Discovery and e-Response for every endpoint, all from a central server. With Talon, you can understand where all the threats and dangers lurk in your network and get rid of them for good. While Talon comes with the Blackhawk appliance, you can buy it separately and access its reports through an online dashboard.

TALON

TALON

Our methodology flips the script on cybersecurity. With Blackhawk, you're not just defending from threats, you're ready to engage them.

FROM PASSIVE TO ACTIVE

With Talon™, you can detect and block the execution of malicious software, disseminate custom threat intel and signatures, gather incident information from an endpoint, and respond and recover from an event.

REMAIN UNDETECTED

Talon scans devices on the network for malware and provides information about any malware to the user. As an agentless device, Talon remains undetected from attackers to better catch and stop them before they do irreparable damage.

CUSTOMIZE YOUR QUERIES

Get the answer you need every time with customizable queries. Talon comes with a core set of commonly asked questions, but the software allows you to craft the right questions to gain the right answer, no matter the incident.

ATTACKERS HAVE METHODS OF DECEIVING AGENT-BASED ENDPOINT DETECTION & RESPONSE (EDR) TECHNOLOGIES.

Using *agent-less* adversary hunt tools such as Talon helps catch attackers off-guard. Talon leverages native Microsoft Windows capabilities to gather incident and adversary information from endpoints, contain and eradicate attackers at endpoints, and implement endpoint remediations to keep attackers out in the future. With Talon, you can detect and block the execution of malicious software, disseminate custom threat intel and signatures, gather incident information from an endpoint, and respond and recover from an event. You can perform e-Discovery and e-Response for all your endpoints from a central server!

BLACKHAWK

ABOUT BLACKHAWKNEST INC.

BlackhawkNest is a cybersecurity company with a full range of custom technology built for front-line security. We combine durable storage hardware and powerful security software to eradicate the toughest cyber threats.
